FORUM

The Future of Sustainable Water Supply in Anne Arundel County and Southern Maryland

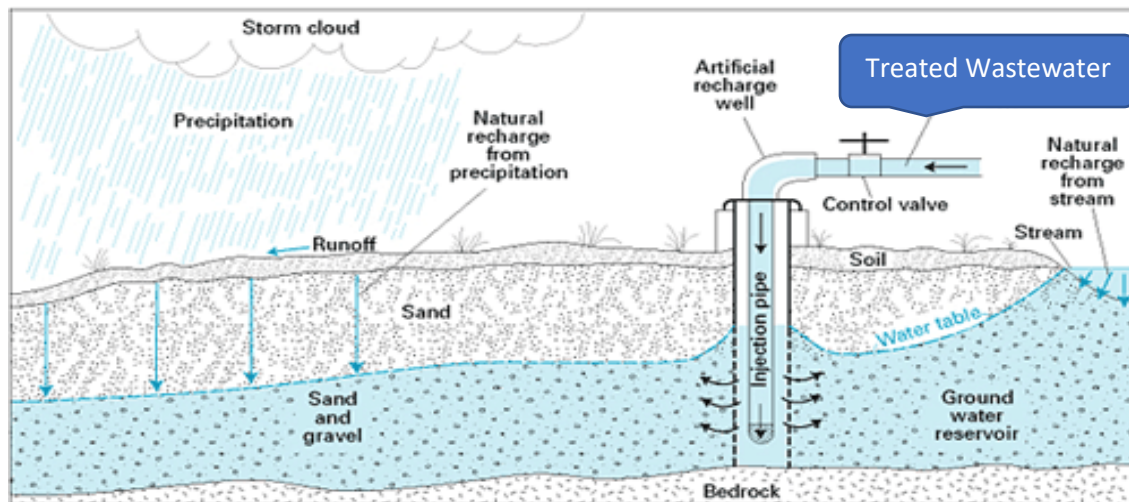

Friday, May 10, 2019, 7:00 to 9:00 PM
Anne Arundel Community College
Center for Applied Learning and Technology (CALT) Room 100
101 College Pkwy, Arnold, MD 21012

Featured Speakers:

Chris Phipps, Anne Arundel County Director of Public Works
Ted Henefin, Hampton Roads, Virginia Sanitary District
Mark Williams & J.P. Stokes, Earth Data

This forum will describe how **Managed Aquifer Recharge** (pumping treated wastewater into aquifers) can address three important issues:

- Aquifer sustainability
- Aquifer saltwater intrusion
- Meeting mandated Bay TMDLs

The Hampton Roads Sanitary District is operating a demonstration plant, and a representative will discuss that program. Mr. Phipps has been leading an effort to evaluate the practicality of Managed Aquifer Recharge for Anne Arundel County. The concept has been used in California and in other parts of the world for some time and is being explored in other jurisdictions of the U.S.
